

The MK114-NPS is a kit allowing temporary, tactical use of our MK114 masts without ground penetration. It will allow mast set up on either very hard surfaces such as paved areas, or very soft surfaces such as loose sand. Parts are included to anchor any of our MK114 mast systems of up to 3 poles.

The kit is comprised of colored plastic plates that anchor the base of the mast as well as the guy points. These are sandbagged in place. Color coordinated sand bags are furnished, as well as a folding shovel. A camouflage carry bag is also included.

USE

- (1) Fill all sand bags first. You will need 8 bags per mast pole.
- (2) For each mast pole, set the center plate and the guy anchor plates so that the guy lines will be at least 45 degrees away from the pole. Use two sand bags per plate.
- (3) A vehicle may be used to anchor a plate, taking care to clear the plug or cleat in the center.
- (4) Set up the mast according to the mast sheet instructions.

Mast pole places over plate with plug.

Guy lines go over plates with cleats.

Example: The sand bags must be placed over the two sides of the plates.
